

CHAMP GYRO SRO™

Another industry first from Axis...

Reliability, Simplicity & Performance. Surface readout and memory capability on a unique solid state North Seeking platform.

The next generation Champ Gyro SRO offers high speed continuous survey capability at speeds of up to 200m (656ft) per minute as well as singleshot, multishot or orientation modes of operation.

Operations can be run in surface readout or memory mode providing unprecedented flexibility to survey the widest range of applications.

A robust intelligent design, low maintenance and cost of repair ensures the SRO's cost of ownership is the lowest in the industry.

As with all Axis technology, it's remarkably simple to operate.

- ✓ North Seeking Solid State
- ✓ Singleshot, Multishot & Orientation
- ✓ High Speed Continuous Operation
- ✓ onPoint™ Adaptive Roll Technology
- ✓ Measure at Any Inclination
- ✓ Surface Readout or Memory
- ✓ Low Cost of Ownership

Upgrade your existing technology today.

Run on E-line, the Champ Gyro SRO provides real time North Seeking gyro data to any surface PC or download data acquired in memory mode via high speed wireless communication.

Once powered up the probe requires less than 60 seconds to warm up before its ready to be run downhole. A 5 min in-hole gyrocompass is all that is required prior to running in high speed continuous mode.

Axis' onPoint™ proprietary Adaptive Roll Technology offers high roll tolerance and surveying speeds up to 200m (656 ft) per min.

Alternatively, North Seeking singleshot, multishot or orientation measurements can be taken as and when required.

Running on cable, encoder depth (e-line or memory) is automatically integrated with azimuth and inclination data throughout the survey.

SRO can be used confidently to run on rods horizontal, pump in surveys, orientation of motor or wedges and much more.

SPECIFICATIONS

Accuracy & Precision

Azimuth : +/- 0.75°*
Inclination : +/- 0.15°
Precision : <0.1% of measured depth (continuous mode)
Gravity Toolface : +/- 0.2°
Gyro Toolface : +/- 0.75°

Range

Operating : -90° to +90°*
Continuous : All Angles

Surface Setup

Warm up time : 45 sec

Downhole Travel (Continuous Mode)

Angular Rate : 200° per second rotation
Velocity (continuous survey) : 200m/min (656ft/min)
Cable length : 5000m (max) (16,404ft)
Cable resistance : 300 Ohm

Depth Assignment

Manual depth input
Wireless or wired depth integration
(AMT Electronic Depth Counter or 3rd party encoder)

Battery

Re-chargeable Li-ion 5000mAh
12 hours continuous operation

Temperature, Shock & Pressure Rating

Temperature : -10°C to +70°C (14°F to 158°F)
Shock : 1000g Axial, ½ sine, 1ms
Pressure rating : 4000psi

Dimensions & Weight

Downhole Probe in Running Gear

Outside Diameter : 42mm (1.65")
E-Line System Length : 2,685mm (105.7")
Memory System Length: 2,713mm (106.8")
Weight : 10kg (22.04lbs) / 18.5kg centralised (40.78lbs)

Surface Interface Unit

L : 300mm (11.81"), W : 200mm (7.87"), H : 150mm (5.90")
Weight : 2kg (4.4lbs)

Power

Input Voltage : 90VAC to 240VDC
Output Current : 125mA
Probe Power Consumption : 2W

Measurements & Communication

Continuous data acquisition every 3m at 180m/min (9.8ft at 590ft/min)
North Seeking singleshot, multishot & orientation
2 min gyrocompass shot time (higher accuracy modes available)
Wireless data communication between tablet and probe
Wireless depth transfer via AMT's Electronic Depth Counter

Surface Computer Requirements

Windows 8/10/XP, USB port

Technical specifications are subject to change without notification.

*Gyrocompass azimuth accuracy is latitude dependent and quoted at 1 sigma at inclinations between -20° to -90° & +20° to +90°.
